FUNCTION: THE BRANCHED-CHAIN ALPHA-KETO DEHYDROGENASE COMPLEX FUNCTION: THE BRANCHED-CHAIN ACTION OF ALPHA-KETO ACIDS TO ACYL-COA AND CO(2). IT CONTAINS MILTIPLE COPIES OF 3 ENZYMATIC COMPONENTS:
BRANCHED-CHAIN ALPHA-KETO ACID DECAMBOXYLASE (E1), LIPOAMIDE ACYLTRANSFERASE (E2) AND LIPOAMIDE DEHYDROGENASE (E3)
COPACTOR: THE E2 COMPONENT CONTAINS ONE COVALENTLY-BOUND LIPOYL
                                                                                                                                                                                                                                                                                                                                                                                                                                        SIMILARITY: BELONGS TO THE 2-OXOACID DEHYDROGENASE SIMILARITY: Contains 1 lipoy1-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MISCELLANEOUS: THE CATALYTIC FUNCTION OF THIS ENZYME IS TO ACL
AND TO TRANSFER TO COENZYME A, ACYL GROUPS THAT ARE GENERATED
THE BRANCHED-CHAIN ALPHA-KETO ACID DECARBOXYLASE COMPONENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBCELIULAR LOCATION: Mitochondrial matrix.

DISEASE: Defects in DBT are a cause of maple syrup urine disease (MSUD); an autosomal recessive disorder characterized by mental and physical retardation, feeding problems, and a maple syrup odd

RI "Amino acid sequence of the alpha and beta subunits of Methanosarcina barkeri ATPase deduced from cloned genes. Similarity to subunits of eukaryotic vacuolar and FOFI-ATPases.";

LJ. Biol. Chem. 264:10954-10959(1989).

C. -!- FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON CONCESS ATP FROM ADP IN THE ARCHAEAL ALPHA CHAIN IS A CONTALYTIC SUBUNIT.

C. -!- CATALYTIC SUBUNIT.

C. -!- CATALYTIC SUBUNIT: ATP + H(2)O + H(+)(In) = ADP + phosphate + C H(+)(Out).
                                                                                                                                                                                                                                                                                                                                                                                                             Matches

"Pathogenesis-related protein 4 is structurally homologous
carboxy-terminal domains of hevein, Win-1 and Win-2.";
Mol. Gen. Genet. 230:113-119(1991).
-!- INDUCTION: By TMV infection.
-!- SIMILARITY: BELONGS TO THE BARWIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PR4B TOBAC STANDARD; PRT; 147 AA.

Plant Syst. Evol. 204:109-123(1997)
-:- FUNCTION: One of the primary rRNA binding proteins, it binds
directly to 16S rRNA where it nucleates assembly of the body of
the 30S subunit (By similarity).
-!- FUNCTION: With S5 and S12 plays an important role in translational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SOUZA-Chies T.T., Bittar G., Nadot

SIMILARITY: Contains 1 S4 RNA-binding domain.
SIMILARITY: BELONGS TO THE S4P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         accuracy (By similarity).

SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein S5.

The interaction surface between S4 and S5 is involved in control of translational fidelity (By similarity).

Plant Syst. Evol. 204:109-123(1997).
-!- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 16S rRNA where it nucleates assembly of the body of the 30S subunit (By similarity).
-!- FUNCTION: With S5 and S12 plays an important role in translational accuracy (By similarity).
-!- SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein S5.
The interaction surface between S4 and S5 is involved in control
                                                                                                                                                                                                                                                                                                                                                                                                                                                               entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -I- FUNCTION: One of the primary rRNA binding proteins, it binds directly to 16S rRNA where it nucleates assembly of the body of the 30S subunit (By similarity).
-I- FUNCTION: With S5 and S12 plays an important role in translation accuracy (By similarity).
-I- SUBUNIT: Part of the 30S ribosomal subunit. Contacts protein S5. The interaction surface between S4 and S5 is involved in control of translational fidelity (By similarity).
-I- SUBCELLULAR LOCATION: Chloroplast.
-I- SIMILARITY: Contains 1 S4 RNA-binding domain.
-I- SIMILARITY: BELONGS TO THE S4P FAMILY OF RIBOSOMAL PROTEINS.

The clones were identified from a cDNA library made from postate tumour tissue. Recombinant PS118 protein is used to detect PS118-specific antibodies, to raise antibodies for detection of PS118 antigens, to screen for specific binding agents (potential therapeutics, and to isolate specific antibodies from serum. Detection of PS118 protein or nucleic acid, which are prostate related, and altered or elevated in prostatic disease, is used for detection, diagnosis, staging, monitoring and prognosis of used for detection, diagnosis, as a staging, monitoring and prognosis of prostatic disease, particularly cancer, and to identify subjects at
Human; prostate;
                                   Human prostate-specific PS118 protein fragment #1.

                                                                                                                                                                                                                                                                                    The present invention relates to a number of prostate-specific sequences derived from the human PS118 gene. These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PS118; prostate;
benign prostatic
                The present sequence is that of a human prostate-specific PS118 polypeptide, as predicted from a partial consensus cDNA sequence (see ABA91651), and lacking the N-terminal region. The PS118 consensus sequence is found at least 12 times more often in prostate than in non-prostate tissue. PS118 polypeptides, including derivatives of the present sequence, polynucleotides, anntibodies, agonists and inhibitors are useful for detecting,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          prostatitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PS118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAM50809 standard;

The PSI18 polypeptides can be produced by expression of PSI18 polynuclostides in transfected host cells. The methods and reagents of the invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers without the use of surgery.

The present invention relates to novel human coding sequences are CC (ABQ99268-ABQ99608) and proteins (ABP65022). The sequences are CC (BADQ99268-ABQ99608) and proteins (ABP65022). The sequences are CC (Polynucleotides may be used in the field of molecular biology as CC (Polynucleotides may be used in the field of molecular biology as CC (Polynucleotides may be used in the field of molecular biology as CC (Polynucleotides may be used in the field of molecular biology as CC (Polynucleotides may be useful in diagnostics as expressed CC (Polynucleotides are useful in diagnostics as expressed CC (Polynucleotides and sequence in the proteins may be used as molecular weight markers, or as nutritional sources or supplements. The proteins may be used to maintain and expand cell population in a totipotential or CC (Polynucleotides and proteins are useful                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

The polynucleotide sequences of the invention were assembled from ESTs isolated mainly by sequencing by hybridisation, and in some cases, sequences obtained from one or more public databases. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ABG09731 standard; Protein; 1982

CC The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CPCR) primers of the production of (II) and the polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (III). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC of the polymer of the printed sequences of the invention.

CC art for wino introductions of the invention.
